

**Best Practice Recommendations for the use of Quat Plus TB during current SARS-CoV-2 (Virus) COVID-19 (Coronavirus disease) Pandemic.  
United States and Canada**

**EPA Registration Number: 1839-83-527**

**Reference DIN: 02241166 (Canadian Reference Product for Interim Approval)**

Quat Plus TB has been tested and found to kill SARS-CoV-2 (the Novel Coronavirus that causes COVID-19) on hard non-porous surfaces in 1 minute.

**Sale and Use in Canada**

Quat Plus TB has been approved by Health Canada for import and sale in Canada under their COVID-19 Interim Policy. This policy makes it possible for certain products to be sold in Canada that may not fully meet regulatory requirements, but do not compromise the safety of Canadians. For example, these are products that may have English-only labelling or different packaging from what was authorized for sale in Canada, or are authorized or registered in other jurisdictions where the regulatory frameworks and quality assurances are similar. As an EPA-registered disinfectant, Quat Plus TB meets the requirement of being registered in a similar jurisdiction and is identical in formulation to a product that has been registered by Health Canada, used as a reference during the approval and listed above.

**It is a violation of Federal law to use any disinfectant in a manner inconsistent with its labeling.  
Quat Plus TB is not for use on medical device surfaces.**

**Directions for Use:**

Remove visible soil prior to application of the product. Apply solution to the area until it is covered with the solution. Allow product to penetrate the surface and to remain wet for the listed contact time. No scrubbing is necessary. Wipe off with a clean cloth, mop or sponge. The product will not leave grit or soap scum.

**Dilution:**

Quat Plus TB is a Ready to Use product that does not require dilution.

**Contact Time:**

Let solution remain on surface for a minimum of 1 minute (60 seconds).

**Removing visible soil deposits from surface:**

This means there cannot be visible soil on the surface when the disinfectant is applied. Preclean visible soil prior to disinfection. Note that in traditional circumstances any cleaning product or method can be used to preclean,

Sustainable Solutions for Health,  
Productivity and the Environment

but it is always best to preclean with the disinfectant. Precleaning with the disinfectant is always our recommendation in environments where people have tested positive for Covid-19. The use of microfiber in the cleaning and/or wiping process of precleaning always will improve the effectiveness of your precleaning.

Do not use thermal or ULV foggers to apply this product. Disinfectants approved for fogging applications must have specific fogging application instructions on the label, and efficacy data approved by the EPA according to their fogging test protocol. Mostly, fogging application will be for applying product for precleaning prior to proper disinfection. Also read the label and remember to follow the label instructions to protect your liability.
